DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 4-5, drawn to polypeptides, classified in class 435, subclass 200.
- II. Claims 6-12, drawn to polynucleotides, vectors and host cells, classified in class 435, subclass 252.3.
- III. Claims 13-14, drawn to microorganisms containing specific plasmids, pRS1b, pRS2a, pRS4 or plasmid pPRS7, classified in class 435, subclass 243.
- IV. Claims 24-25, drawn to a process of preparation of a chemical compound, classified in class 435, subclass 91.53.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III are patentably distinct from each other. The polypeptide of group I, the polynucleotide of group II, and the microorganisms of group III are all products, each comprise amino acid sequences and nucleotide sequences which are chemically unrelated, do not require each other for practice; have separate utilities, such as use of the group I polypeptide to catalyze a hydrolytic reaction versus the use of polynucleotide in a hybridization reaction and are subject to separate manufacture and sale. The groups have acquired separate status in the art and separate fields of search.

Inventions I, III and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the

Art Unit: 1652

product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the polypeptide can be used to raise specific antibodies and the microorganism can be used for isolating proteins or plasmids as opposed tot heir use in the method of group IV.

Inventions II and IV are patentably unrelated to one another. The polynucleotides of group II is neither used nor made in the method of group IV. They are subject to separate manufacture and sale. The groups have acquired separate status in the art and separate fields of search.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Carmella Stephens on 7-2-03 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1652

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
